Standard Guide

## High Speed Doors NZ Ltd

Independently owned and operated in Christchurch with offices in Wellington, we have both the technical knowledge and experience to manufacture, install, service and repair a wide range of quality commercial roller doors to suit your individual needs.

We also have distributors based in Dunedin, Invercargill, Queenstown, Timaru, Blenheim and Nelson.

Whether you require protection for excessive wind conditions, extra security needs, ventilation, increased vision and light, we have the solution for you.

Our highly skilled team are all Site Safe certified and provide fast and efficient installation for all our products.

### Manufacturing

Manufacturing is based in Christchurch and we freight to all locations throughout New Zealand.

Lead times are 2-3 week's; however, you can rely on us to meet your requirements when urgent repairs are needed.

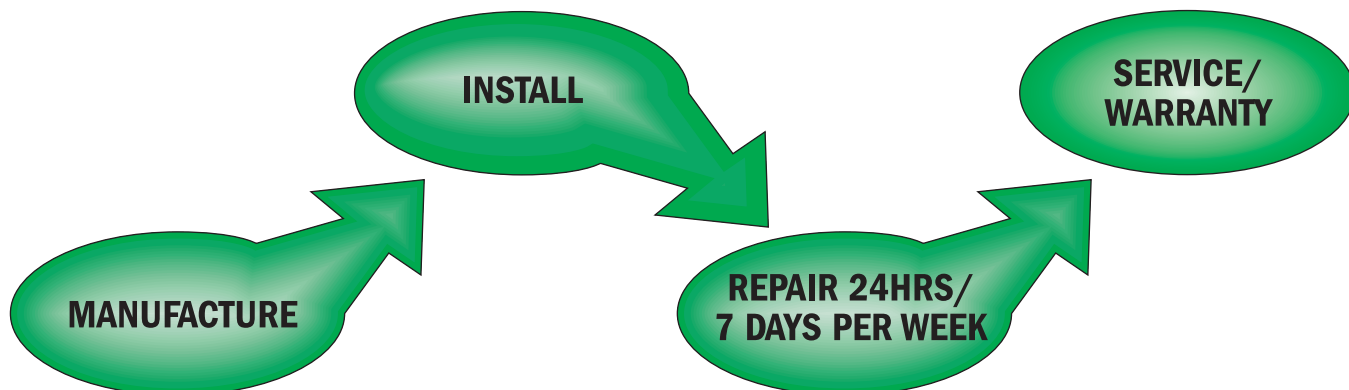

### Installation and Repairs

Our fully equipped vans and hiab truck are used to provide safe and efficient

installation of our products. We operate 24 hours, 7 days per week to ensure customer's problems and requirements are dealt with in a fast and efficient manner.

### Service

We are dedicated in offering specialist after sales Service to continuously support the maintenance of our products. Service and Maintenance Agreements are available with flexible renewal dates, so you can be assured your door will remain in good working condition.

## Products

### Our Product

Our roller shutter doors are constructed from galvanized rolled formed replaceable interlocking slats and come in a range of profiles designed to suit different conditions.

### Vented Screen:

The vented screen is perfect for car park situations of where ventilation is an issue.

It is made of steel, which is much stronger and secure than standard 19mm aluminium roller grille.

### Vision Roller Shutter

This is a revolutionary product and is perfect when you need light in your premises. Polycarbonated inserts provide light energy and retain the heat. Security is assured, as window inserts cannot be removed from the outside

### Wicket Gate

Wicket Gates are manufactured at our premises and facilitate entry and exit without having to open the whole Roller Shutter Door. This provides good security and easy opening of the Roller shutter.

### Powder Coated Slat

You can choose a colour for your roller door that reflects your business. Zincalume Coated Slat is also available.

### Manual Operation

Manual operation is by hand chain driving steel sprockets connected to a spring assisted barrel. Manual operated doors can easily be motorised at a later date if required. Spring balanced operation doors are available on smaller size shutters.

### Motorisation

High Speed Doors (NZ) Ltd is the South Island Distributor for Grifco Australia.

The Grifco Maestro range of industrial door operators come with sophisticated electronics that improve installation and operation methods.

Operators are powered by 3 Phase or Single Phase 0.75kw (1hp) Electric motors with A.C.E.M. (Automated Chain Engage Mechanism) gear boxes. Motors are also available in 1.5hp for roller shutters exceeding 36sqm.

### Features include:

- Multiple overload protection settings
- Low voltage plug in controller with 6m lead and glands
- Call for service indicator
- push button set limit switches (eliminates mechanical limits).

### Optional Accessories Include:

- Immediate upgrade to remote control with 2 x transmitters and Receiver (no wiring required)
- Reflective beam to beam photo cells
- Ground loops for automatic opening with adjustable time before closing
- Expansion boards

The Standard Maestro Mechanical gearbox with A.C.E.M is also available for use in pre-wired situations.
